

## INDEX TO VOLUME 238 (A)

- Aeroplane, general motion (Brodetsky), 305.  
 Asymptotic expansion of integral functions defined by Taylor series (Wright), 423.
- Barrell, H. and Sears, J. E. The refraction and dispersion of air for the visible spectrum, 1.  
 Bose, A. *See* Krishnan, Mookherji and Bose.  
 Brodetsky, S. The general motion of the aeroplane, 305.
- Clark, J. S. An absolute determination of the acceleration due to gravity, 65, 549.  
 Crystallographic studies of meteoric iron (Young), 393.
- Doodson, A. T. Tides in oceans bounded by meridians. IV. Series solutions in terms of angular width of ocean: semidiurnal tides in narrow oceans. V. Solutions by use of finite differences: semidiurnal tides, 477.
- Fenning, R. W. and Whiffin, A. C. The specific heat of gases at high temperatures, 149.
- Gandy, R. W. G. and Southwell, R. V. Relaxation methods applied to engineering problems. V. Conformal transformation of a region in plane space, 453.  
 Gravity, absolute determination of the acceleration (Clark), 65, 549.
- Hartree, D. R., Hartree, W. and Swirles, B. Self-consistent field, including exchange and superposition of configurations, with some results for oxygen, 229.  
 Howland, R. C. J. and Knight, R. C. Stress functions for a plate containing groups of circular holes, 357.
- Kellermann, E. W. Theory of the vibrations of the sodium chloride lattice, 513.  
 Knight, R. C. *See* Howland and Knight.  
 Krishnan, K. S., Mookherji, A. and Bose, A. Investigations on magne-crystallic action, VI. Further studies on paramagnetic crystals, 125.
- Magne-crystallic action, VI. (Krishnan, Mookherji and Bose), 125.  
 Mookherji, A. *See* Krishnan, Mookherji and Bose.
- Refraction and dispersion of air for the visible spectrum (Barrell and Sears), 1.  
 Relaxation methods applied to engineering problems. V (Gandy and Southwell), 453.
- Sears, J. E. *See* Barrell and Sears.  
 Self-consistent field, including exchange and superposition of configurations, with some results for oxygen (Hartree, Hartree and Swirles), 229.  
 Sodium chloride lattice, vibrations (Kellermann), 513.  
 Southwell, R. V. *See* Gandy and Southwell.  
 Specific heat of gases at high temperatures (Fenning and Whiffin), 149.  
 Stress functions for a plate containing groups of circular holes (Howland and Knight), 357.  
 Swirles, B. *See* Hartree and Swirles.
- Thunderstorms and lightning discharges, effects on the earth's electric field (Wormell), 249.  
 Tides in oceans bounded by meridians. IV. V. (Doodson), 477.

Whiffin, A. C. *See* Fenning and Whiffin.

Wormell, T. W. The effects of thunderstorms and lightning discharges on the earth's electric field, 249.

Wright, E. M. The asymptotic expansion of integral functions defined by Taylor series, 423.

Young, J. Crystallographic studies of meteoric iron, 393.

# CONTENTS

Series A      Volume 238

The refraction and dispersion of air for the visible spectrum. By H. BARRELL and J. E. SEARS, JUNR. . . . .	page 1
An absolute determination of the acceleration due to gravity. By J. S. CLARK	65, 549
Investigations on magne-crystallic action. VI. Further studies on paramagnetic crystals. By K. S. KRISHNAN, A. MOOKHERJI and A. BOSE . . . . .	125
The specific heat of gases at high temperatures. By R. W. FENNING and A. C. E. M. WRIGHT . . . . .	423
Relaxation methods applied to engineering problems. V. Conformal transformation of a region in plane space. By R. W. G. GANDY and R. V. SOUTHWELL, F.R.S. . . . .	453
Tides in oceans bounded by meridians. IV. Series solutions in terms of angular width of ocean: semidiurnal tides in narrow oceans. V. Solutions by use of finite differences: semidiurnal tides. By A. T. DOODSON, F.R.S.	477
Theory of the vibrations of the sodium chloride lattice. By E. W. KELLERMANN	513
Index . . . . .	551

The paper by S. Brodetsky, number A 792, is not yet ready for distribution, and delivery will be delayed.

Series A      Volume 238

The refraction and dispersion of air for the visible spectrum. By H. BARRELL and J. E. SEARS, JUNR. . . . .	page 1
An absolute determination of the acceleration due to gravity. By J. S. CLARK	65, 549
Investigations on magne-crystallic action. VI. Further studies on paramagnetic crystals. By K. S. KRISHNAN, A. MOOKHERJI and A. BOSE . . . . .	125
The specific heat of gases at high temperatures. By R. W. FENNING and A. C. WHIFFIN. (Plate 1) . . . . .	149
Self-consistent field, including exchange and superposition of configurations, with some results for oxygen. By D. R. HARTREE, F.R.S., W. HARTREE and B. SWIRLES . . . . .	229
The effects of thunderstorms and lightning discharges on the earth's electric field. By T. W. WORMELL. (Plates 2-17) . . . . .	249
The general motion of the aeroplane. By S. BRODETSKY . . . . .	305
Stress functions for a plate containing groups of circular holes. By R. C. J. HOWLAND and R. C. KNIGHT . . . . .	357
Crystallographic studies of meteoric iron. By J. YOUNG. (Plates 18, 19) . . . . .	393
The asymptotic expansion of integral functions defined by Taylor series. By E. M. WRIGHT . . . . .	423
Relaxation methods applied to engineering problems. V. Conformal transformation of a region in plane space. By R. W. G. GANDY and R. V. SOUTHWELL, F.R.S. . . . .	453
Tides in oceans bounded by meridians. IV. Series solutions in terms of angular width of ocean: semidiurnal tides in narrow oceans. V. Solutions by use of finite differences: semidiurnal tides. By A. T. DOODSON, F.R.S.	477
Theory of the vibrations of the sodium chloride lattice. By E. W. KELLERMANN	513
Index . . . . .	551

## ADVERTISEMENT

THE Committee appointed by the *Royal Society* to direct the publication of the *Philosophical Transactions* take this opportunity to acquaint the public that it fully appears, as well from the Council-books and Journals of the Society as from repeated declarations which have been made in several former *Transactions*, that the printing of them was always, from time to time, the single act of the respective Secretaries, till the Forty-seventh Volume; the Society, as a Body, never interesting themselves any further in their publication than by occasionally recommending the revival of them to some of their Secretaries, when, from the particular circumstances of their affairs, the *Transactions* had happened for any length of time to be intermitted. And this seems principally to have been done with a view to satisfy the public that their usual meetings were then continued, for the improvement of knowledge and benefit of mankind: the great ends of their first institution by the Royal Charters, and which they have ever since steadily pursued.

But the Society being of late years greatly enlarged, and their communications more numerous, it was thought advisable that a Committee of their members should be appointed to reconsider the papers read before them, and select out of them such as they should judge most proper for publication in the future *Transactions*; which was accordingly done upon the 26th of March, 1752. And the grounds of their choice are, and will continue to be, the importance and singularity of the subjects, or the advantageous manner of treating them: without pretending to answer for the certainty of the facts, or propriety of the reasonings contained in the several papers so published, which must still rest on the credit or judgment of their respective authors.

It is likewise necessary on this occasion to remark, that it is an established rule of the Society, to which they will always adhere, never to give their opinion, as a Body, upon any subject, either of Nature or Art, that comes before them. And therefore the thanks, which are frequently proposed from the Chair, to be given to the authors of such papers as are read at their accustomed meetings, or to the persons through whose hands they received them, are to be considered in no other light than as a matter of civility, in return for the respect shown to the Society by those communications. The like also is to be said with regard to the several projects, inventions, and curiosities of various kinds, which are often exhibited to the Society; the authors whereof, or those who exhibit them, frequently take the liberty to report, and even to certify in the public newspapers, that they have met with the highest applause and approbation. And therefore it is hoped that no regard will hereafter be paid to such reports and public notices; which in some instances have been too lightly credited, to the dishonour of the Society.
