

Antarctic ecology: from genes to ecosystems. Part 2: Evolution, diversity and function

*Papers of a Theme Issue compiled and edited by A. D. Rogers, E. J. Murphy, A. Clarke
and N. M. Johnston*

Editorial	2185
B. Heap	
Introduction. Antarctic ecology: from genes to ecosystems. Part 2. Evolution, diversity and functional ecology	2187
A. D. Rogers, E. J. Murphy, N. M. Johnston & A. Clarke	
Evolution and biodiversity of Antarctic organisms: a molecular perspective	2191
A. D. Rogers	
Molecular ecophysiology of Antarctic notothenioid fishes	2215
C.-H. C. Cheng & H. W. Detrich III	
Thermal limits and adaptation in marine Antarctic ectotherms: an integrative view	2233
H. O. Pörtner, L. Peck & G. Somero	
Diversity and genomics of Antarctic marine micro-organisms	2259
A. E. Murray & J. J. Grzymiski	
The biodiversity and ecology of Antarctic lakes: models for evolution	2273
J. Laybourn-Parry & D. A. Pearce	
Global change tipping points: above- and below-ground biotic interactions in a low diversity ecosystem	2291
D. H. Wall	
Spatial and temporal variability across life's hierarchies in the terrestrial Antarctic	2307
S. L. Chown & P. Convey	
Fisheries in the Southern Ocean: an ecosystem approach	2333
K.-H. Kock, K. Reid, J. Croxall & S. Nicol	
Environmental forcing and Southern Ocean marine predator populations: effects of climate change and variability	2351
P. N. Trathan, J. Forcada & E. J. Murphy	
Erratum	2367
Indexes	2369
